REPORT

Value added course is the type of course which help a particular individual to develop their own skills in their chosen field of the study. They are mostly independent to each type of the fields. It facilitates the students as well as the faculty to keep pace with the latest technologies pertaining to their chosen field of studies. The awareness about value added courses among the students was found to be good, but much more awareness has to be created as the students are benefitted by these courses.

C is the most commonly used programming language in industry. Academic institutions have a mission to teach technologies that are widely used in the real world so that students have the skills and knowledge that employers need. More than 90 percent of the programs running on our desktops, from operating systems and e-mail clients to Web browsers and word processors, are written in C or its relative, C++ which has extensions to C

Upon completion of this course students will be able to:

1. Work on C Languages
2. Understanding a functional hierarchical code organization.
3. Write a program for simple applications of real life

In that spirit we have successfully conducted Value Added Course in C programming for B.Sc VI sem non-computer students. The course was held between 27th Feb 2020 and 29th March 2020 for a total of 30 hours. It includes theory and practical sessions with 20 hours(th) and 10 hours(pr) split.
